Loago L. Moremi

Tati Siding, Botswana
LinkedIn — GitHub — Portfolio

Summary

Computer Science & Software Engineering graduate with hands-on experience building production-ready full-stack web and mobile applications, including an AI-powered mobile app backed by a multi-service architecture. Gained enterprise IT experience at Debswana Diamond Company, rotating across four IT sub-departments and contributing to a 250-device Windows 11 rollout, with hands-on work in Active Directory, Intune, and large-scale corporate infrastructure.

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, HTML5, CSS3
Frameworks & Libraries: React, Next.js, Vite, React Native, Expo, FastAPI, Node.js, Express
Databases & Backend: SQLite, Firestore, Supabase, PostgreSQL, SQLAlchemy
APIs & AI: REST APIs, Firebase Authentication, Firebase Admin SDK, Google Gemini API
Development Tools: Git, GitHub, VS Code, Android Studio, npm, EAS, ffmpeg
Deployment & Infrastructure: Vercel, Railway, Render
Mobile Development: React Native, Expo, Android, Offline-First Architecture
Enterprise IT: Microsoft 365, Active Directory, Microsoft Intune, VMware vCenter, Device Deployment, User Provisioning, Windows 11

Projects

brAInwave - AI Study Planner GitHub
React Native, Expo, Node.js, Firebase, Supabase, Python, FastAPI, Google Gemini, SQLite, Railway

- Designed a multi-service backend architecture (FastAPI on Railway, Firebase for auth, Supabase for persistence) rather than a monolith, to isolate the AI processing layer and keep mobile client logic thin
- Used Google Gemini's structured output support to reliably extract deadlines and topics from unstructured syllabus files into JSON timetables
- Implemented SQLite-based offline caching so users retain their schedules without an active connection
- Built file ingestion pipeline supporting syllabus and assignment uploads; handled parsing edge cases where document formatting broke structured extraction

copus - MP3 to Opus/OGG Converter Live | GitHub
Node.js, Express, ffmpeg, Multer, HTML, CSS, JavaScript

- Diagnosed and fixed mobile download failures caused by browser blob URL limitations; resolved by moving to server-side file serving with explicit content-disposition headers
- Configured CORS, file type filtering, and upload size limits before deployment to Render
- Wrapped ffmpeg as a server-side conversion pipeline, handling codec flags and output buffering rather than relying on client-side tooling

Hackathons

BOCRA Website Development Hackathon Live | GitHub
Team Lead & Frontend Developer

- Led a six-person team in developing *BOCRA Connect*, a responsive regulatory services platform prototype addressing usability, accessibility, service integration, and self-service requirements outlined in the hackathon brief
- Made frontend architecture and implementation decisions while coordinating development across frontend, backend, UI/UX, project management, and business analysis roles

- Built the primary frontend using Next.js, React, TypeScript, Tailwind CSS, and shadcn/ui, with mobile-first responsive design and WCAG-focused accessibility including keyboard navigation, ARIA roles and live regions, semantic landmarks, visible focus states, reduced-motion support, and screen-reader testing
- Integrated authentication and backend services, including Google sign-in, REST API integration, and frontend data abstraction, while working alongside the backend team on service integration
- Owned frontend deployment and environment configuration on Vercel and contributed to backend deployment on Railway
- Prepared and submitted the final hackathon deliverables, including the source code, solution URL, and walkthrough video

Experience

Debswana Diamond Company Jun 2025 – Jul 2025
IT Attaché (Internship), Orapa, Botswana

- Rotated across Back-Office, Networks, Applications, and Desktop teams - the breadth gave context for how IT decisions at the infrastructure level propagate to end-user tooling
- Handling ∼50 of 250 devices in a Windows 10 → 11 migration: coordinated per-device manual installations after automated deployment hit compatibility issues, reinstalling each user's software stack and reconfiguring Intune policies and AD group assignments
- Resolved hardware and software issues across multiple sites; documented recurring fault patterns to reduce repeat escalations
- Gained operational exposure to VMWare vCenter and Azure fundamentals in an enterprise environment, observing how virtualisation and cloud identity are managed at scale

Leadership & Activities

Botswana International University of Science and Technology Aug 2022 – May 2024
Class Representative

- Acted as liaison between 20+ students and faculty across two academic years, handling scheduling conflicts, communication feedback in both directions, and escalating concerns to the relevant department staff

Education

Botswana International University of Science and Technology 2022 – 2026
BSc. Computer Science and Software Engineering
GPA: 3.79 / 5.0
